- LAB 6–Data Sharing with Snowsight WebUI.
- Types of data sharing supported in Snowflake – Data Exchange
- Summary.

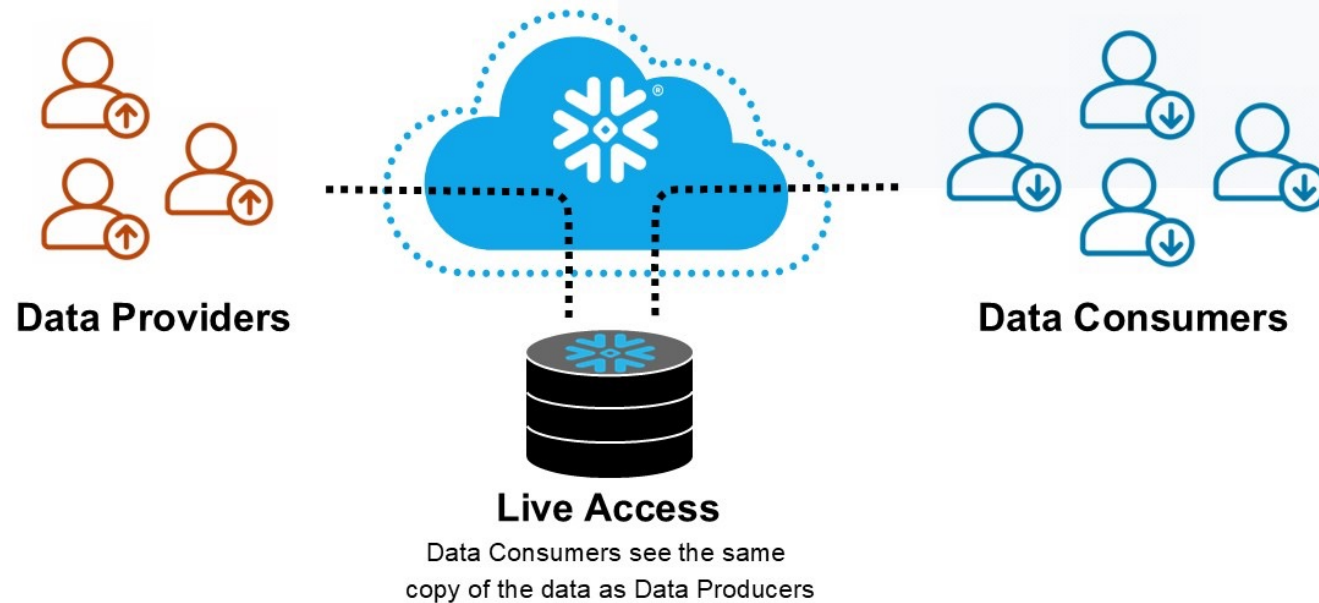

What is Data Sharing in Snowflake?

Data Sharing is a Snowflake feature in which objects like tables and views from one account can be shared with other Snowflake accounts without recreating the data.

The account that shares the data is called the producer account. The account that consumes the data is called the consumer account.

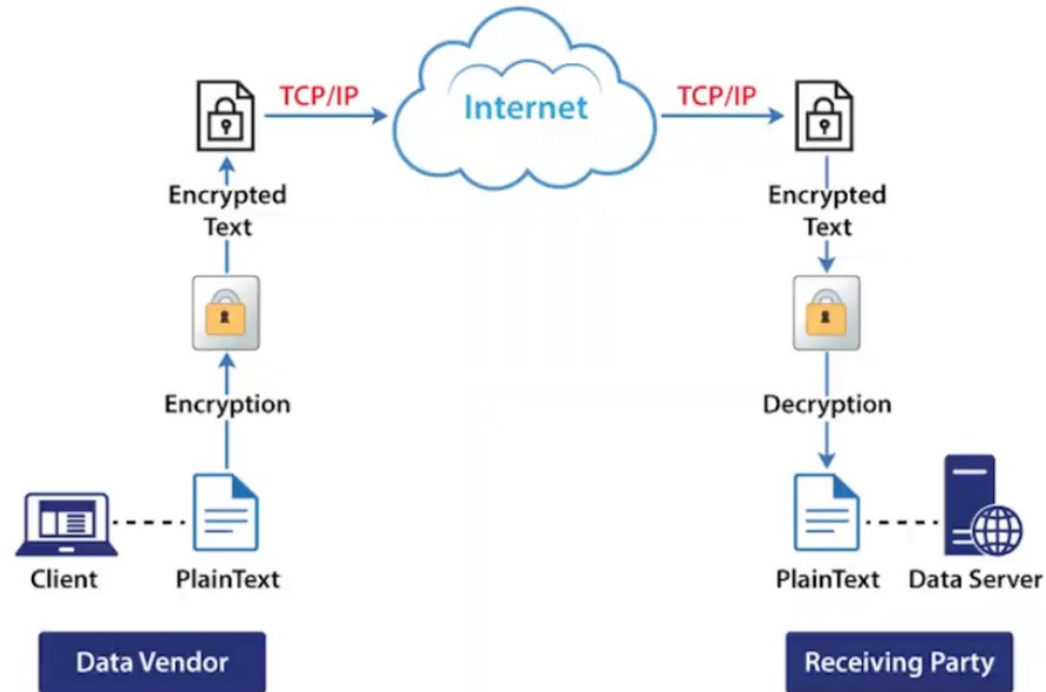

SNOWFLAKE DATA SHARING

A BETTER WAY TO SHARE DATA

What is Data Sharing in Snowflake?

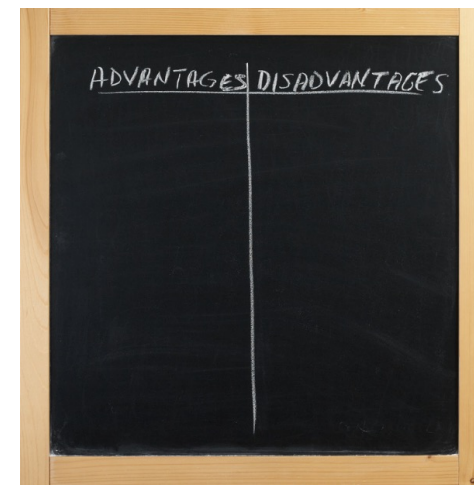

Secure FTP

What is Data Sharing in Snowflake?

Disadvantages of sFTP Data Sharing

- File transfer between can fail.
- Security and Hacking risk.
- Slow transfer rate for large files.
- File Transfers need to be scheduled , monitored and errors need to be fixed.
- Time delay between file being sent and being received by the endpoint.

Advantages of Snowflake Data Sharing.

- Snowflake Data Sharing is instantaneous.
- Size of the data has no impact on the performance of the data sharing activity.
- Saving of time as Data sharing is much faster and does not consume ongoing maintenance time.
- Less error prone and more secure.

What is Data Sharing in Snowflake?

The objects that can be shared in Snowflake are.

- Databases
- Schemas
- Tables
- Secure views
- Views
- Dynamic tables
- External tables
- Apache Iceberg™ tables
- Secure materialized views
- Secure user-defined functions (UDFs)
- Models without code (CORTEX_FINETUNED)

What is a Snowflake Reader Account ?

A Snowflake Reader Account is a special type of Snowflake account designed to facilitate data sharing with an organization that does not have a Snowflake account of its own.

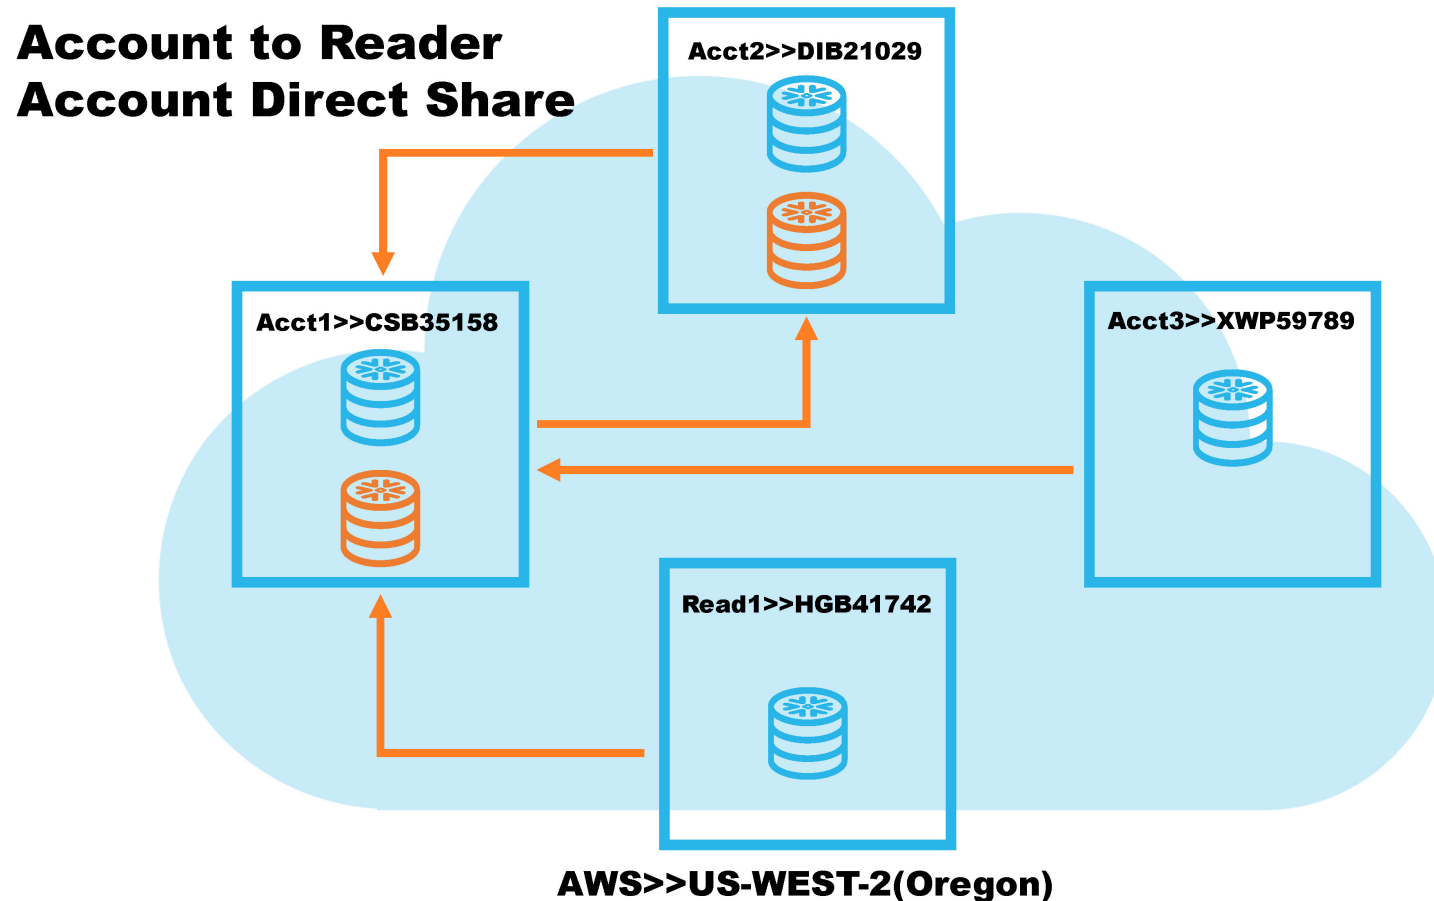

Features of Snowflake Reader Accounts

- Reader Account is created in the producer account by the account admin and credentials are provided to be able to access the shared data.
- Data consumer(Reader Account) does not pay anything for accessing the data as credit costs are paid by the producer account.
- Producer account maintains full control on the data including access and the ability to make changes to the data.
- Reader accounts cannot create SHARE objects themselves which can then be shared with other accounts.

What is a Snowflake Reader Account ?

A Snowflake Reader Account is a special type of Snowflake account designed to facilitate data sharing with an organization that does not have a Snowflake account of its own.

Types of data sharing supported in Snowflake ?

Types of Data Sharing supported in Snowflake are

- Direct Share
- Listing
- Data Exchange

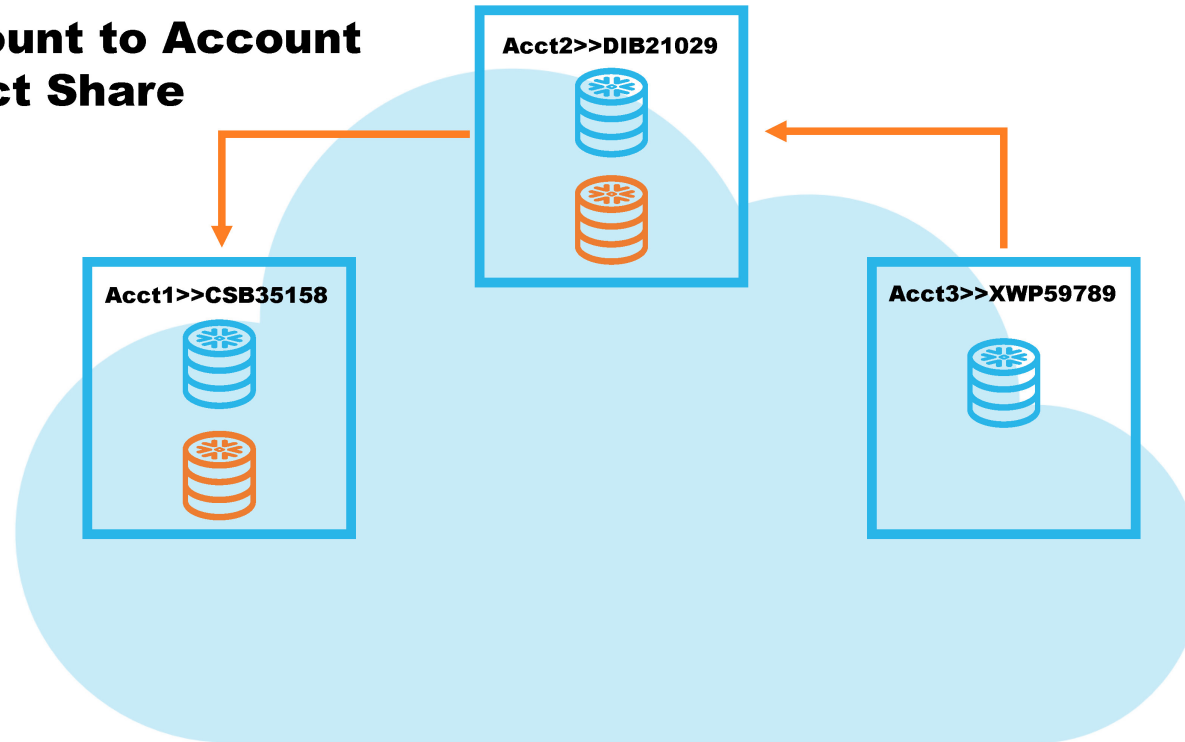

Types of data sharing supported by Snowflake ?

Direct Share

Direct Share is a type of data sharing in which you share objects like tables and views from one account to another account in the same region. Direct share is the most extensively used type of share in Snowflake.
